

Data Request Services at an Urban Public Health Department

Ann Glusker

Epidemiologist: Public Health – Seattle & King County

MLIS student : glusker@u.washington.edu

- The Epidemiology, Planning and Evaluation Unit has a dedicated information specialist who answers about 225 requests a year (about 2,500 to date!)
- The health department also has a librarian, who maintains the digital library, answers questions, performs literature searches, etc.

-Types of requesters:

- 1) within the health department
- 2) city and county government
- 3) the media
- 4) university researchers
- 5) students
- 6) grant writers
- 7) community organizations
- 8) private individuals, and many others

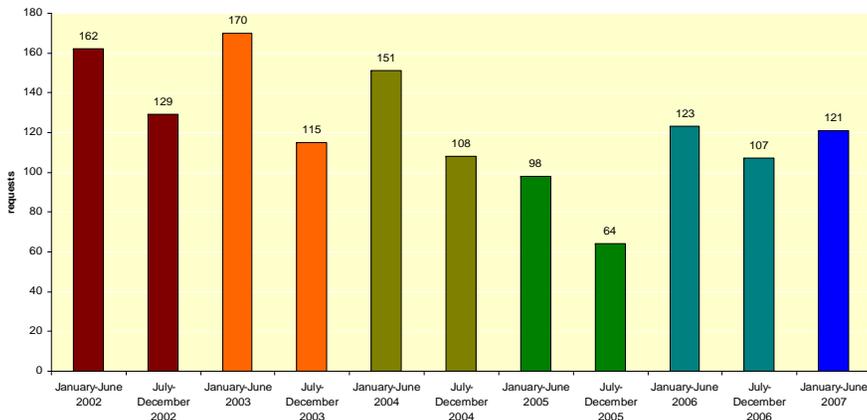

-Types of questions:

- 1) general data question → What is happening to teen pregnancy rates in King County?
- 2) specific data question → What is happening to teen pregnancy rates (among 15-17 year olds) in the Renton School District in King County in the last five years, by race/ethnicity?
- 3) general research question → What are the dangers of cell phone towers?
- 4) specific research question → What is the best data source to use if I want to look at maternal risk factors for low birth weight by mom's country of birth?
- 5) government service question → Where can I find a free clinic for a Hep B shot?
- 6) other → What is my life expectancy?

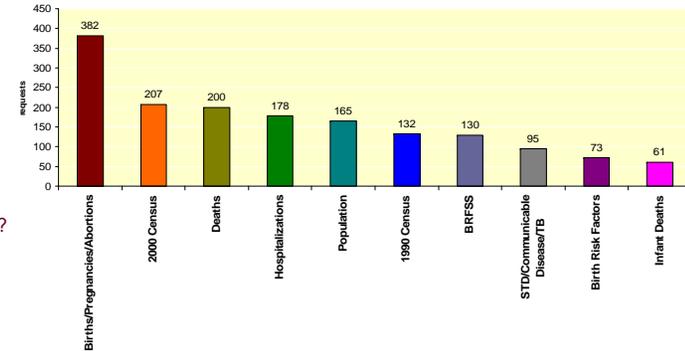

-How we answer:

- 1) Customized analyses, with files containing the data (tables, charts) and explanatory e-mail
- 2) Phone conversation, leading the requester through resources and web sites
- 3) Referral to appropriate resources
- 4) Community-based training ("From Data to Action")
- 5) Contracts developed for workplans for larger projects

PHSKC Data Requests by Month/Year, 2002-2007

Top Ten Data Sources, PHSKC Data Requests, 1997-2007

-Data and Resources used:

- 1) Vital statistics- births, deaths (also hospitalizations, communicable disease, etc.)
- 2) US Census data and other population estimate data
- 3) Survey data (BRFSS, HYS, in-house surveys)
- 4) online resources, including the Public Health Digital Library <http://www.metrokc.gov/health/library/>

-Changes in the service over the past 10 years:

- 1) THE INTERNET. Much more is available there, and people expect to find everything they need there.
- 2) The internet, and better computing resources in general, mean that requests have become more complex and involved.
- 3) As budgets become tighter, the commitment to this central service is constantly under scrutiny (overall it is a valued service)

-Current challenges:

- 1) Juggling multiple data sets and analytical issues
- 2) Deciding who our target is
- 3) How best to deliver information to varied audiences
- 4) How many limits to place on services available
- 5) Data privacy issues (e.g. mapping)
- 6) Tracking the service (showing value)

-Future Trends?

- 1) More data on the internet could mean a role shift, towards searching guidance and technical assistance
- 2) Integrate use of Web 2.0 technologies
- 3) Develop collaborations with outside agencies (data users, libraries, etc.)
- 4) Develop data user guides (already have for census web site)
- 5) Get user input by surveying "frequent flyers"
- 6) Advertise the service more widely (implications?)
